# Octave Quick Reference Octave Version 3.0.0

## **Starting Octave**

octave	start interactive Octave session		
${ t octave} \ file$	run Octave on commands in file		
octaveeval	codeEvaluate code using Octave		
octavehelp	describe command line options		

# **Stopping Octave**

quit or exit	exit Octave
INTERRUPT	$(e.g.\ \mathtt{C-c})$ terminate current command
	and return to top-level prompt

## Getting Help

help	list all commands and built-in variables
help command	briefly describe command
doc	use Info to browse Octave manual
doc command	search for command in Octave manual
lookfor $str$	search for $command$ based on $str$

## Motion in Info

SPC or C-v	scroll forward one screenful
DEL or M-v	scroll backward one screenful
C-1	redraw the display

## Node Selection in Info

n	select the next node
p	select the previous node
u	select the 'up' node
t	select the 'top' node
d	select the directory node
<	select the first node in the current file
>	select the last node in the current file
g	reads the name of a node and selects it
C-x k	kills the current node

# Searching in Info

1
٤
-

#### Command-Line Cursor Motion

C-b	move back one character
C-f	move forward one character
C-a	move to the start of the line
С-е	move to the end of the line
M-f	move forward a word
M-b	move backward a word
C-1	clear screen, reprinting current line at top

# **Inserting or Changing Text**

DEL	delete character to the left of the curso
C-d	delete character under the cursor
C-v	add the next character verbatim
C-t	transpose characters at the point
M-t	transpose words at the point

insert a tab character

#### surround optional arguments ... show one or more arguments

# Killing and Yanking

C-k	kill to the end of the line
С-у	yank the most recently killed text
M-d	kill to the end of the current word
M-DEL	kill the word behind the cursor
М-у	rotate the kill ring and yank the new top

# Command Completion and History

	inpresion and income
TAB	complete a command or variable name
M-?	list possible completions
RET	enter the current line
C-p	move 'up' through the history list
C-n	move 'down' through the history list
M-<	move to the first line in the history
M->	move to the last line in the history
C-r	search backward in the history list
C-s	search forward in the history list
$\texttt{history}  \left[ \text{-q} \right]  \left[ N \right]$	list $N$ previous history lines, omitting history numbers if $\neg q$
$\verb history -w  [file] $	write history to file (~/.octave_hist if no file argument)
$\verb history -r  [file] $	<pre>read history from file (~/.octave_hist if   no file argument)</pre>
edit_history lines	edit and then run previous commands
	from the history list

run\_history lines run previous commands from the history [beg] [end] Specify the first and last history

commands to edit or run.

If beg is greater than end, reverse the list of commands before editing. If end is omitted, select commands from beg to the end of the history list. If both arguments are omitted, edit the previous item in the history list.

#### Shell Commands

$\operatorname{cd} dir$	change working directory to dir			
pwd	print working directory			
ls[options]	print directory listing			
getenv (string)	return value of named environment			
	variable			
system (cmd)	execute arbitrary shell command string			

#### Matrices

Square brackets delimit literal matrices. Commas separate elements on the same row. Semicolons separate rows. Commas may be replaced by spaces, and semicolons may be replaced by one or more newlines. Elements of a matrix may be arbitrary expressions, assuming all the dimensions agree.

Г	x,	y,	]	enter a	a	row vector
	x;	y;	]	enter a	a	column vector
Г	w,	x;	y, $z$ ]	enter a	a	$2\times2$ matrix

# Multi-dimensional Arrays

Multi-dimensional arrays may be created with the cat or reshape commands from two-dimensional sub-matrices.

squeeze (arr)	remove singleton dimensions of the array.
ndims (arr)	number of dimensions in the array.
permute $(arr, p)$	permute the dimensions of an array.
ipermute $(arr, p)$	array inverse permutation.

shiftdim (arr, s) rotate the array dimensions. circshift (arr, s) rotate the array elements.

# Sparse Matrices

```
sparse (...)
                   create a sparse matrix.
speye (n)
                   create sparse identity matrix.
sprand (n, m, d) sparse rand matrix of density d.
spdiags (...)
                   sparse generalization of diag.
nnz(s)
                   No. non-zero elements in sparse matrix.
```

# Ranges

```
base: limit
base: incr: limit
Specify a range of values beginning with base with no
elements greater than limit. If it is omitted, the default
value of incr is 1. Negative increments are permitted.
Strings and Common Escape Sequences
A string constant consists of a sequence of characters
```

# enclosed in either double-quote or single-quote marks. Strings in double-quotes allow the use of the escape sequences below.

\\	a literal backslash
\"	a literal double-quote character
\',	a literal single-quote character
\n	newline, ASCII code 10
\t	horizontal tab, ASCII code 9

#### Index Expressions 1 4 1 4 6

var (idx)	select elements of a vector
var ( $idx1$ , $idx2$ )	select elements of a matrix
scalar	select row (column) corresponding to
	scalar
vector	select rows (columns) corresponding to
	the elements of vector
range	select rows (columns) corresponding to
	the elements of range
:	select all rows (columns)
	` /

#### Global and Persistent Variables

```
global var1 ... Declare variables global.
global var1 = val Declare variable global. Set initial value.
persistent var1 Declare a variable as static to a function.
persistent var1 = Declare a variable as static to a function
                     and set its initial value.
Global variables may be accessed inside the body of a
function without having to be passed in the function
parameter list provided they are declared global when used.
```

#### Selected Built-in Functions

EDITOR	editor to use with edit.	_history
Inf, NaN	IEEE infinity, NaN	·
NA	Missing value	
PAGER	program to use to pagir	ate output
ans	last result not explicitly	assigned
eps	machine precision	
pi	$\pi$	
1i realmax realmin	$\begin{array}{l} \sqrt{-1} \\ \text{maximum representable} \\ \text{minimum representable} \end{array}$	
Copyright 1996, 1997,	2007 John W. Eaton	Permissions on back

#### **Assignment Expressions**

_	_
var = expr	assign expression to variable
var (idx) = expr	assign expression to indexed variable
var (idx) = []	delete the indexed elements.
$var \{idx\} = expr$	assign elements of a cell array.

## Arithmetic and Increment Operators

```
addition
x - y
                     subtraction
x * y
                     matrix multiplication
                     element by element multiplication
x \cdot * y
x / y
                     right division, conceptually equivalent to
                      (inverse (y') * x')'
x \cdot / y
                     element by element right division
                     left division, conceptually equivalent to
x \setminus y
                      inverse (x) * v
                     element by element left division
x \cdot y
x \hat{y}
                     power operator
                     element by element power operator
x \cdot \hat{y}
- x
                     negation
+ x
                     unary plus (a no-op)
_{x} ,
                     complex conjugate transpose
x .
                     transpose
++ x (-- x)
                     increment (decrement), return new value
x ++ (x --)
                    increment (decrement), return old value
```

## Comparison and Boolean Operators

These operators work on an element-by-element basis. Both arguments are always evaluated.

```
x < y
                    true if x is less than y
x \le y
                    true if x is less than or equal to y
x == y
                    true if x is equal to y
                    true if x is greater than or equal to y
x \ge y
                    true if x is greater than y
x > y
x != y
                    true if x is not equal to y
x & y
                    true if both x and y are true
x \mid y
                    true if at least one of x or y is true
                    true if bool is false
! bool
```

# **Short-circuit Boolean Operators**

Operators evaluate left-to-right. Operands are only evaluated if necessary, stopping once overall truth value can be determined. Operands are converted to scalars using the all function.

```
true if both x and y are true
x && u
x \mid \mid y
                     true if at least one of x or y is true
```

# Operator Precedence

Table of Octave operators, in order of increasing precedence.

```
statement separators
                   assignment, groups left to right
11 &&
                   logical "or" and "and"
l &z
                   element-wise "or" and "and"
< <= == >= > !=
                   relational operators
                   colon
                    addition and subtraction
                   multiplication and division
                   transpose
+ - ++ -- !
                   unary minus, increment, logical "not"
                   exponentiation
```

#### Paths and Packages

 path
 display the current Octave function path.

 pathdef
 display the default path.

 addpath(dir)
 add a directory to the path.

 EXEC\_PATH
 manipulate the Octave executable path.

pkg listdisplay installed packages.pkg load packLoad an installed package.

#### Cells and Structures

 $var.field = \dots$  set a field of a structure.  $var\{idx\} = \dots$  set an element of a cell array. cellfun(f, c) apply a function to elements of cell array.

fieldnames(s) returns the fields of a structure.

#### Statements

for  $identifier = expr \ stmt$ -list endfor

Execute *stmt-list* once for each column of *expr*. The variable *identifier* is set to the value of the current column during each iteration.

while (condition) stmt-list endwhile

Execute stmt-list while condition is true.

break exit innermost loop
continue go to beginning of innermost loop
return return to calling function

100am to caming random

if (condition) if-body [else else-body] endif

Execute if-body if condition is true, otherwise execute else-body.

if (condition) if-body [elseif (condition) elseif-body] endif Execute if-body if condition is true, otherwise execute the elseif-body corresponding to the first elseif condition that is true, otherwise execute else-body.

Any number of elseif clauses may appear in an if statement.

 ${\tt unwind\_protect\_cleanup}\ cleanup\ {\tt end}$ 

Execute body. Execute cleanup no matter how control exits body.

try body catch cleanup end

Execute body. Execute cleanup if body fails.

#### Strings

 strcmp (s, t)
 compare strings

 strcat (s, t, ...)
 concatenate strings

 regexp (str, pat)
 strings matching regular expression

 regexprep (str, pat, rep)
 Match and replace sub-strings

#### **Defining Functions**

function [ret-list] function-name [(arg-list)]
 function-body
endfunction

ret-list may be a single identifier or a comma-separated list of identifiers delimited by square-brackets.

arg-list is a comma-separated list of identifiers and may be empty.

## **Function Handles**

QfuncDefine a function handle to func. @(var1, ...) expr Define an anonymous function handle. str2func (str) Create a function handle from a string. functions Return information about a function (handle) handle. func2str (handle) Return a string representation of a function handle. handle (arg1, ...) Evaluate a function handle. feval (func, arg1, Evaluate a function handle or string, ...) passing remaining args to func Anonymous function handles take a copy of the variables in the current workspace.

#### Miscellaneous Functions

 eval (str)
 evaluate str as a command

 error (message)
 print message and return to top level

 warning (message)
 print a warning message

 clear pattern
 clear variables matching pattern

 exist (str)
 check existence of variable or function

 who, whos
 list current variables

 whos var
 details of the variable var

## **Basic Matrix Manipulations**

rows (a) return number of rows of a columns (a) return number of columns of a all (a) check if all elements of a nonzero check if any elements of a nonzero any (a)find (a) return indices of nonzero elements sort (a) order elements in each column of a sum(a)sum elements in columns of aprod (a) product of elements in columns of a min (aras) find minimum values max (args) find maximum values rem (x, y)find remainder of x/yreshape (a, m, n) reformat a to be m by n diag (v, k)create diagonal matrices linspace (b, l, n) create vector of linearly-spaced elements logspace (b, l, n) create vector of log-spaced elements eye (n, m)create n by m identity matrix ones (n, m)create n by m matrix of ones zeros (n, m)create n by m matrix of zeros rand (n, m)create n by m matrix of random values

#### Linear Algebra

U	
chol (a)	Cholesky factorization
$\det$ (a)	compute the determinant of a matrix
eig(a)	eigenvalues and eigenvectors
expm(a)	compute the exponential of a matrix
hess (a)	compute Hessenberg decomposition
inverse ( $a$ )	invert a square matrix
norm(a, p)	compute the $p$ -norm of a matrix
pinv (a)	compute pseudoinverse of $a$
qr (a)	compute the QR factorization of a matrix
rank(a)	matrix rank
$\mathtt{sprank}$ (a)	structural matrix rank
schur (a)	Schur decomposition of a matrix
svd(a)	singular value decomposition
syl(a, b, c)	solve the Sylvester equation

## Equations, ODEs, DAEs, Quadrature

\* See the on-line or printed manual for the complete list of arguments for these functions.

#### Signal Processing

fft (a)

ifft (a)

ifft (a)

inverse FFT using FFTW

freqz (args)

filter (a, b, x)

conv (a, b)

hamming (n)

return Hamming window coefficients

return Hanning window coefficients

#### Image Processing

colormap (map) set the current colormap gray2ind (i, n)convert gray scale to Octave image image (imq, zoom) display an Octave image matrix imagesc (img, zoom) display scaled matrix as image imread (file) load an image file imshow (img, map) display Octave image imshow (i, n)display gray scale image imshow (r, g, b)display RGB image imwrite (img, file) write images in various file formats ind2gray (img, map) convert Octave image to grav scale ind2rgb (imq, map) convert indexed image to RGB rgb2ind (r, a, b)convert RGB to Octave image save a matrix to file

open file name

# C-style Input and Output

fopen (name, mode)

close filefclose (file) printf (fmt, ...) formatted output to stdout fprintf (file, fmt, ...) formatted output to file sprintf (fmt, ...) formatted output to string scanf(fmt)formatted input from stdin fscanf (file, fmt) formatted input from file sscanf (str, fmt) formatted input from string fgets (file, len) read len characters from file fflush (file) flush pending output to file ftell (file) return file pointer position frewind (file) move file pointer to beginning freport print a info for open files read binary data files fread (file, size, prec) fwrite (file, size, prec) write binary data files feof (file) determine if pointer is at EOF

A file may be referenced either by name or by the number returned from fopen. Three files are preconnected when Octave starts: stdin, stdout, and stderr.

# Other Input and Output functions

save file var ... save variables in file

load file disp (var) load variables from file display value of var to screen

## Polynomials

compan (p)companion matrix conv(a, b)convolution deconv(a, b)deconvolve two vectors create polynomial from a matrix poly (a) polyderiv (p) derivative of polynomial polyreduce (p) integral of polynomial polyval (p, x)value of polynomial at xpolyvalm (p, x)value of polynomial at xroots (p) polynomial roots residue (a, b) partial fraction expansion of ratio a/b

#### Statistics

corrcoef (x, y)correlation coefficient cov(x, y)covariance mean(a)mean value median (a) median value std (a) standard deviation var (a) variance

#### Plotting Functions

plot (args) 2D plot with linear axes plot3 (args) 3D plot with linear axes line (args) 2D or 3D line patch (args) 2D patch semilogx (args) 2D plot with logarithmic x-axis semilogy (args) 2D plot with logarithmic y-axis loglog (args) 2D plot with logarithmic axes

bar (args) plot bar charts stairs (x, y)plot stairsteps stem (x, y)plot a stem graph hist (y, x)plot histograms contour (x, y, z) contour plot title (string) set plot title axis (limits) set axis ranges xlabel (string) set x-axis label ylabel (string) set y-axis label zlabel (string) set z-axis label text (x, y, str)add text to a plot legend (string) set label in plot key grid on off set grid state

hold [on off] set hold state

ishold return 1 if hold is on, 0 otherwise

plot 3D surface mesh (x, y, z)

meshgrid (x, y)create mesh coordinate matrices
